

Modern beverage runs on OHANAFY.

Product Suite Catalog

A working map of the platform: packages, the features inside them (an Experience with a UI, or a Backend object with none), and the Persona Apps each experience is allocated to. Built to seed the product catalog missing from the Configuration Workbook.

Draft v0.3

Source: Brian <> Bryson OMS/WMS breakdowns, Jul 23

Confirmed: OMS, WMS

Draft: Routing, Accounting

Reference impl: Gulf Distributing

START HERE

How the model works

This catalog does two jobs. It maps **features to packages**, and it maps **experiences to Persona Apps**. The only split that matters for a feature is whether it has a UI. OMS and WMS are confirmed from the July 23 sessions. Routing and Accounting are marked draft and still being detailed.

LAYER 1

Package

A sellable product area. **OMS** and **WMS** are confirmed. **Routing** and **Accounting** are in progress.

LAYER 2

Feature

Either an **Experience** (it has a UI) or a **Backend object** (no UI, it stores data or runs logic the experiences use).

LAYER 3

Persona App

Each persona works in one app, its **Persona App**. A Picker gets the **Picker Persona App** and sees only the experiences allocated to it.

EXPERIENCE

 has a UI, lives in a Persona App

BACKEND OBJECT

 no UI, powers experiences

DRAFT

 not yet confirmed

ADD LATER

 known, not yet modeled

How the packages fit together

- **OMS and WMS ship together.** You cannot run one without the other right now. Selling either on its own is a stretch goal.
- **Routing lives inside OMS today.** It is owned by Mac and still being detailed. The goal is to make it sellable on its own.
- **Records like the Invoice are shared, top-level objects.** OMS creates the invoice, Routing marks it delivered, and Accounting mostly views it.
- **A backend Platform package holds shared OMS and WMS logic.** It is not configured per customer, so it is not in this catalog.

LAYER 1 + 2 Packages and their features

Four packages are modeled: **OMS** and **WMS** (confirmed), plus **Routing** and **Accounting** (draft). Each feature is tagged **Experience** or **Backend object**. Click a feature to see where it lives. Greyed cards flag packages we know are coming.

OMS

Order Management System

Primary persona: **Sales Rep**

Everything before the warehouse fulfills an order. Selling to accounts, pricing, promotions, and turning a sale into an invoice.

Data flow: Warehouse inventory (from WMS), Accounts, and the pricing engine.

5 experiences 3 backend objects

Order / Invoice	EXPERIENCE ▶
Take Inventory	EXPERIENCE ▶
Swap / Credit	EXPERIENCE ▶
Pricing	EXPERIENCE ▶
Promotions	EXPERIENCE ▶
Placement	BACKEND OBJECT ▶
Gap / Mandate	BACKEND OBJECT ▶

WMS

Warehouse Management System

Primary personas: **Product Handler + Picker**

Everything inside the four walls. Inventory truth, receiving, put-away, replenishment, picking, verify and load, counting, and the manager map.

Data flow: Purchase orders and shipments in. Sellable inventory out to OMS.

10 experiences 2 backend objects

BACKEND OBJECT

ROUTING

DRAFT

Routing

Primary personas: **Sales Rep + Delivery Driver**

The shared layer between selling and delivering, used by reps and drivers. Lives inside OMS today.

Feature set is incomplete. Routing is owned by Mac and will be detailed with her. Samsara provides the truck GPS.

Data flow: Invoices from OMS. Truck GPS from Samsara.

2 experiences 4 backend objects

ACCT

DRAFT

Accounting & Finance

Primary persona: **Accountant / Finance**

The financial system of record. Reads the shared Invoice object and runs the money side.

New package, not yet detailed. Owned by Thomas.

Data flow: Invoices from OMS. Delivery status from Routing. Costs and variances from WMS.

BACKEND OBJECT

DRAFT

FUTURE

ADD LATER

FUTURE

ADD LATER

Retail Execution (Rex)

Goals, incentives, and displays, and likely POS. Built for TBM, never adopted, and not in the Gulf go-live.

Supplier Portal

Supplier-facing portal for depletions, gaps, and claims. Owned by Ian.

FUTURE

ADD LATER

E-commerce

Online ordering. Owned by Sanchez.

FUTURE

ADD LATER

Platform (backend)

Shared logic across OMS and WMS, such as inventory management. Not configured per customer.

LAYER 3 Persona Apps and their experiences

A persona is the name of an app. If your job is Picker, you get the Picker Persona App and see only the experiences allocated to it. The design goal is that a persona **never leaves their Persona App**. Each card lists the experiences in that Persona App, plus the backend objects it reads. Greyed cards are Persona Apps we know we will need but have not modeled.

Sales Rep Persona App

OMS + Routing

The main OMS app. Works a route stop by stop, runs a short protocol at each stop, then places the order.

EXPERIENCES IN THIS PERSONA APP

Order / Invoice

Take Inventory

Swap / Credit

BACKEND OBJECTS IT READS

Route

Stop

Placement

Gap / Mandate

Promotion

Inventory (read)

DAY IN THE LIFE

- 1 Open the app.** Assigned routes, each with its stops. The goal is they never leave this screen.
- 2 Arrive at a stop.** A task list, or protocol, before ordering.
- 3 Take Inventory.** Count what is on the shelf. Not every visit. Confirms order size and flags close-to-code.
- 4 Swap / Credit.** Handle a broken or out-of-code item. Alabama uses swaps. Elsewhere a credit takes it off

Product Handler Persona App

WMS

The true warehouse worker. Moves stock and verifies loads. Not one job all day. Tasks arrive by priority, one at a time.

EXPERIENCES IN THIS PERSONA APP

Receiving

Put Away

Replenishment

Verify / Load

BACKEND OBJECTS IT READS

Inventory

DAY IN THE LIFE

- 1 Open a simple app.** One task at a time. Blind to the next one so no one cherry-picks the easy work.
- 2 Get a task.** For example, Receive shipment 123. Hit Start.
- 3 Run the experience.** Receiving, put-away, replenishment, or verify launches as its own guided flow. Scan throughout.

the balance.

- 5 **Run any ad-hoc tasks.** For example check the beer license. A reminder only, not tracked in the system.
- 6 **Order.** Resolves price codes, calculates prices, flags promotions, pre-populates placements, shows live inventory.
- 7 **Checkout and move on.** Once submitted it becomes a WMS problem. Editable until the cutoff. Next stop.

- 4 **Finish.** The next task appears. Could be a different job entirely. Forklift-certified handlers also get replenishment.

Picker Persona App

WMS

Pulls ordered stock for fulfillment. Assignment is a management choice: locked to zones, aisles, layer line, or close-to-code, or a blind next-task pool.

EXPERIENCES IN THIS PERSONA APP

Picking

BACKEND OBJECTS IT READS

Inventory

Pick path

DAY IN THE LIFE

- 1 **Get a pick task.** Pick a quantity of an item at a location, with a pallet to build.
- 2 **Scan.** Scan the location, then the item.
- 3 **Pick All, Short, or Drop.** Pick All if all good. Short if backstock is empty. Drop if stock sits above the pick face, which fires a high-priority replenishment.
- 4 **Report breakage.** Record any broken quantity if something is dropped.
- 5 **Finish the pallet.** A task is usually a whole path or pallet. Hand off if needed, then get the next task.

Counter Persona App

WMS

Runs cycle counts by supplier on a weekly rotation. Often a seasonal or intern role. Counts blind and never sees variance.

EXPERIENCES IN THIS PERSONA APP

Counting

BACKEND OBJECTS IT READS

Inventory

DAY IN THE LIFE

- 1 **Open a supplier count task.** For example Yuengling on Monday. The app lists all that supplier's products.
- 2 **Count blind.** Enter counts with no expected quantity shown.
- 3 **Close out.** Save at end of day. The next counter continues an unfinished supplier.

Sales Manager Persona App

OMS

Sets up the selling rules the reps run on. Works in configuration experiences, not the rep app.

EXPERIENCES IN THIS PERSONA APP

Warehouse Manager Persona App

WMS

Runs the floor. Configures the warehouse map, oversees task status, resolves discrepancies, and steers near-code inventory.

Delivery Driver Persona App

DRAFT · NEEDS REVIEW

Routing + WMS

Runs the same routes and stops as sales, typed Delivery. Unloads, closes out swaps, and collects payment. Routing is owned by Mac and still being detailed.

EXPERIENCES IN THIS PERSONA APP

Add to Truck (draft)

Finalize Stock / Payment (draft)

BACKEND OBJECTS IT READS

Route

Stop

Delivery record

Invoice (shared)

Samsara

DAY IN THE LIFE

- 1 Open the app.** The day's delivery stops, same layout as the sales rep, worked in enforced order.
- 2 Arrive and unload.** Mostly physical. Little system work at the stop.
- 3 Add to Truck.** Close out any swap the rep started, with a reason code for broken or refused stock.
- 4 Finalize and collect payment.** Hand over the invoice and take payment. Alcohol pays at delivery, no short pay without an override.
- 5 Check out and drive on.** Finalizing marks the invoice delivered. Next stop.

Accountant / Finance Persona App

DRAFT · NEEDS REVIEW

Accounting

Works the money side. Mostly views the shared Invoice object and reconciles. Owned by Thomas and not yet detailed.

EXPERIENCES IN THIS PERSONA APP

Financial views (draft)

BACKEND OBJECTS IT READS

REFERENCE

Key concepts

The vocabulary a new hire or a customer needs to follow the rest of this catalog. Type to filter.

Filter terms (e.g. layer line, pick path, short pay)...

Experience

A feature that has a UI. It gets placed into one or more Persona Apps.

Backend object

A feature with no UI. It stores data or runs logic that experiences use.

Persona (app)

The name of an app. A persona sees only the experiences allocated to their app.

Baseline price

The supplier-mandated default price for an item before any discount.

Price code / price group

Promotion

A rule that discounts items off baseline by criteria like brand, package, or territory.

A second discount stacked on top of the price-code price. BOGO or buy X get a percentage off.

Placement

A backend record that a customer has bought an item before. Built by placing orders. Expires if unsold.

Gap / Mandate

A supplier-expected placement that a customer is missing. Reps get paid to close them.

Order = Invoice

OMS holds the order and the invoice as one shared object. At Gulf, payment is collected at delivery.

Cutoff time

The configurable moment after which an order can no longer be edited.

Code date

The product expiration date. Drives recalls by item and date.

Lot Inventory

The backend split of on-hand quantity across its different code dates.

Blind receiving

Counting an inbound truck without seeing expected quantities, to catch errors and fraud.

BOL

Bill of lading. The promised contents of a shipment, ideally pre-uploaded by the supplier.

Claim

A logged discrepancy or breakage against a shipment. Breakage attaches a photo.

Staging

A marked floor area where received pallets sit before put-away.

Backstock

The reserve storage a product goes to after receiving.

Pick face

The pick location a picker pulls from. Replenished from backstock.

Replenishment

Refilling the pick face from backstock based on min/max thresholds.

Waterfall bins

Stacked bins (1a, 1b, 1c) filled front to back. One move can spawn several tasks.

Labor saver

Skipping the rotation when code dates match, pulling straight to the front.

Warehouse Visualization

The manager map and config: by-location, item slotting, and pick path. Working name.

By-location view

The warehouse hierarchy (warehouse, aisle, bin) where locations are turned on or off.

Item / ISQ view

Where each SKU's pick location, layer line, and backstock are configured.

Pick path

Layer line

The backend route through the warehouse that drives picking order. AB aisle is high-priority manual picking.

A pick method that grabs full product layers for select high-velocity SKUs, topped off by manual picking.

Short (pick)

A pick outcome meaning backstock is empty and the full quantity cannot be pulled.

Drop (pick)

A picker signal that stock sits above the pick face, firing a high-priority replenishment.

Verify / Load

Checking a built pallet, then scanning it to the dock onto the truck.

Cycle count

Counting a supplier's products on a weekly rotation to track variance.

Slotting

The rules and visualization for where product lives in the warehouse. Feeds the pick path.

Close to code

Stock near expiration. Sold only to high-velocity accounts. Never auto-picked.

Intercompany transfer

Stock moving between warehouses. Received like a PO but against a transfer record.

Route

The truck plus all its stops for the day. Shared by sales and delivery, typed and assigned.

Stop

A single location on a route where a rep sells or a driver drops.

Delivery record

A backend list of the invoices on a route, plus the truck. Tied to the account.

Add to truck

The driver closing out a rep-initiated swap by taking the item back onto the truck.

Finalize stock

The driver closing a stop by collecting payment and marking invoices delivered.

Short pay

Paying less than invoiced. Not allowed for alcohol without a manager override.

Samsara

The GPS telematics on the trucks, integrated into Routing.

Swap

Exchanging a broken or out-of-code item for equal value. Required in Alabama.

Credit

Taking a returned item off the balance with no inventory move. Not allowed in Alabama.

Retail Execution (Rex)

Goals, incentives, and displays package. Half-built for TBM, not in the Gulf scope.

Shared Invoice object

One invoice record all packages access. OMS creates it, Routing marks it delivered, Accounting views it.

Open items and future ideas

What this catalog still needs, and where the platform could go once the basics run smoothly.

Open items

- **Routing detail with Mac.** The full feature set, the Samsara GPS integration, and the routing management dashboard.
- **Accounting detail with Thomas.** The full package beyond the shared Invoice object.
- **Loader vs Verifier.** Confirm they are one task and the dock-scan step. Email Chandler.
- **Pick task scope.** Whole pallet or path vs single item, and the pallet scan and handoff flow. Email Chandler.
- **Counting variance view.** The manager view of count variance is a separate app that is not yet defined.
- **Retail Execution (Rex).** Goals, incentives, displays, and likely POS. Abandoned, not in the Gulf go-live.
- **Gap direction.** Confirm the supplier to distributor to retailer flow.
- **Crane put-away.** Confirm high-velocity SKUs skip staging.
- **Pricing UI.** Whether pricing keeps a custom experience or moves to standard Salesforce object creation.
- **Naming.** Gaps vs Mandates. Warehouse Visualization vs Warehouse Management.

Future and AI ideas

- **Warehouse heat map.** A slotting view showing what is hot, low, or empty so managers can re-slot and keep the pick path efficient.
- **Code Date Sentinel.** A red, yellow, green flag on inventory by expiration against a global threshold. Red means get it out the door.
- **Close-to-code routing.** If-then rules by store velocity that suggest which near-code stock to push and where.
- **Auto replenishment to kill the Drop.** Generating replenishment tasks automatically so pickers rarely need to hit Drop.
- **North star.** Move customers off spreadsheets and into guided optimization instead of drowning in data.

Potential Personas

Personas captured in the **Gulf On-Site Review, July 20 to 21, 2026**. These are candidates for the catalog, pulled from the review's Persona column and session notes. They are not yet modeled as Persona Apps above.

Filled chips already map to a persona in this catalog. **Outlined** chips are net-new candidates.

Ohanafy Product Suite Catalog · Draft v0.3 · Built from the Brian <> Bryson OMS/WMS breakdowns on July 23.

OMS and WMS are transcript-confirmed. Routing and Accounting are draft and need review before they go into the Configuration Workbook.
